ON THE MONTELLO HILL: ONE VIEW OF THE FIRE, ONE OF THE PLAIN

A new residential unit on the south side of the Montello hill designed by Architect Filippo Caprioglio welcomes a large panoramic fireplace with a 360-degree view of the fire and a rectangular base in the center of the living room.

A living room designed with two large windows that frame the splendid views that can be admired: looking southward towards the plain on clear days one can catch a glimpse of the Venetian lagoon and the outline of the Euganean Hills, northward the typical vegetation of Montello with its large chestnut trees and typical depressions.

At the center of the living room is the fireplace from the PANORAMIC collection, where the view of the fire has its highest expression, being able to enjoy it from every angle. A central fireplace with glass without any metal profile, with a motorized rise n'fall system for maximum ease of management, both for loading wood and for cleaning.

In Arch. Caprioglio's design the fireplace was located in the center, not only of the living room, but of the entire house. From the entrance, it immediately becomes the protagonist, but without precluding the view to the magnificent window looking south. Thanks to the glass

on all 4 sides, the gaze can pass through it so that it is an element that does not divide but relates the two rooms, makes them live together thanks to the warmth and light of the flame.

We are immersed in nature and natural materials were also used for the finishes, wood is the material chosen for the floors, for the lining of a wall and on the fireplace hood, an imposing stone block houses the base of the fireplace. The warmth of wood is combined with natural stone elements found in the landscape, which itself becomes part of the interior of the home.

Overlooking the dining area is a loft also with a panoramic view towards the plain, here the chimney, a structural component, becomes an architectural element.

The part of the room used as a dining area in addition to enjoying the view outside gives a glimpse of the kitchen so that the spaces are shared. The house is lived in every space with defined functions but with areas that are connected with each other making it always alive. At the center of it all, the Panoramic fireplace brings warmth and light, and, the fire with its crackling, also becomes part of the life of the house.
